

Measuring nanoparticles made easy.

Partector 2 – Nanoparticle Dosimeter

The world's smallest
multi-metric
nanoparticle detector

Good reasons to choose a Partector 2

Multiple metrics

Measures number concentration, average particle diameter, UFP mass and lung-deposited surface area simultaneously.

Short warmup time

Start measuring within 30 seconds

Alarm capability

With user-defined alarm level

Miniature

142 x 88 x 34 mm
great for
personal exposure
measurements

Simple to use

No working fluid necessary

Lightweight

420 g only

Great battery life

22 hours

The Partector2 – designed for...

Personal exposure monitoring

The partector measures all nanoparticles – so you can use it to measure exposure to engineered nanoparticles, environmental tobacco smoke, welding fumes, traffic-related nanoparticles or anything else. The partector is ideally suited for occupational safety and health studies.

Workplace surveillance

The partector can be used to monitor nanoparticle levels in a laboratory or nanoparticle production facility 24/7. It can sound an alarm, and with its data log, you can quickly check when high concentrations occurred.

Environmental monitoring

Small, light and cheap – the partector is the ideal instrument for studies where nanoparticle concentrations are to be measured with high spatial resolution. By applying multiple instruments simultaneously, you can measure transport phenomena and particle concentration distributions. By combining partector data with GPS data, you can easily visualize your measurement in Google Earth.
